LOCATOR F-Tx™
A NEW WAY TO THINK ABOUT FIXED FULL-ARCH RESTORATIONS.

LOCATOR F-Tx is a simplified, time-saving solution for fixed full-arch restorations with no compromise to prosthesis strength or esthetics. Designed to be a simpler alternative to conventional screw-retained systems, it features a novel, patent-pending “snap-in” attachment that eliminates the need for sub-gingival cement or screw access channels. As an exceptional solution for immediate provisionalization, the system offers a definitive long-term solution with a complete range of final restorative options including all-acrylic, metal-reinforced acrylic, PFM, and all-zirconia frameworks. Truly unique and cutting-edge, LOCATOR F-Tx is sure to devise satisfaction for both the patient and clinician.

SIMPLICITY
Easy “snap-in” attachment and minimal components streamline procedures, while the unique design of the LOCATOR F-Tx Fixed Attachment System accommodates divergent/convergent scenarios up to 40 degrees between implants without the need for angled abutments.

STRENGTH AND ESTHETICS
No cylinders, screw access channels, and screw heads to compromise esthetics or weaken the prosthesis. The ability of each Denture Attachment Housing to pivot on the Abutment up to 20 degrees in any direction allows the housing to be positioned into the ideal location for the prosthesis.

TIME SAVINGS
Significant chair time savings over conventional techniques for fabrication of an immediate provisional prosthesis. Patient visits are also expedited and simplified with quick, easy removal of the prosthesis during follow-up visits for final impressions and try-ins, as well as future recall and maintenance visits.

To learn more about the simplicity, time savings, and unique “snap-in” attachment of the new LOCATOR F-Tx™ Fixed Attachment System please visit us at www.zestdent.com/ftx

LOCATOR F-Tx™
A NEW WAY TO THINK ABOUT FIXED FULL-ARCH RESTORATIONS.
What if screws or cement were no longer needed to attach a fixed prosthesis to the abutments? What if you could shorten and simplify the treatment appointment? What if the patient’s esthetics and comfort were maximized? These questions were at the foundation of the design and development for the unique and innovative LOCATOR F-Tx™ Fixed Attachment System from Zest Dental Solutions. By leveraging our many years of expertise with the LOCATOR® Attachment System and our understanding of full-arch solutions for edentulous patients, we strived to create a simpler, more efficient system for fixed full-arch implant restorations.

**INTRODUCING LOCATOR F-Tx™. THE FIRST FIXED FULL-ARCH RESTORATION WITHOUT COMPROMISE.**

**SECURE SNAP-FIT DESIGN**
This revolutionary patented snap-fit technology enables a ball and socket, allowing the denture to be placed and secured into the desired location. Once in place, it can easily be removed by the clinician during hygiene and maintenance visits.

**REVOLUTIONARY PROSTHESIS REMOVAL SYSTEM**
Removing the LOCATOR F-Tx prosthesis is quick and easy by using simple hydraulic displacement to disengage the prosthesis from the LOCATOR F-Tx abutments.

**SIMPLIFIED ANGLE CORRECTION/STRESS FREE PASSIVE FIT**
- The LOCATOR F-Tx features a unique, spherical coronal geometry which allows the prosthesis to rotate in any direction and correct up to 40 degrees of convergence/divergence between two implants eliminating the need for angled abutments.
- Chair side processing procedures at final prosthesis delivery ensure a stress-free, passive fit.

**DENTURE ATTACHMENT HOUSING**
- Secure attachment housing is injected immediately after cannula removal. The ball that snaps onto the LOCATOR F-Tx abutments is molded from the LOCATOR F-Tx abutments.
- Features a passivated pink finish for improved esthetics.
- Aggressive grooves and flat edges for vertical and rotational movement.
- Denture attachment housing is passively installed into the prosthesis via a chair side technique.

**RETENTION/PROCESSING BALLS**
PEEK Retention Balls are available in low, medium and high retention levels based on the needs of the case.
- A Processing Ball comes pre-inserted with the Denture Attachment Housing, and an additional Processing Ball is included, both are used for provisionalization and laboratory procedures.

**DENTURE ATTACHMENT HOUSING**
- Denture attachment housing is threaded internally to accept a PEEK Retention Ball that snaps into the LOCATOR F-Tx abutment.
- Features a passivated pink finish for improved esthetics.
- Aggressive grooves and flat edges for vertical and rotational movement.
- Denture attachment housing is passively installed into the prosthesis via a chair side technique.

**ALL-IN-ONE PACKAGING**
- LOCATOR F-Tx features all-in-one packaging that includes everything you need. Abutment caps to deliver the abutment to the implant site, Denture Attachment Housing with pre-inserted Processing Ball, or two Processing Balls as well as one Blue (Low), Tan (Medium), and Green (High) Retention Ball.

**SECURE SNAP-FIT DESIGN**
This revolutionary, patent-pending retention system works similar to a ball and socket, allowing the denture to be placed and secured into the desired location. Once in place, it can easily be removed by the clinician during hygiene and maintenance visits.

**REVOLUTIONARY PROSTHESIS REMOVAL SYSTEM**
Removing the LOCATOR F-Tx prosthesis is quick and easy by using simple hydraulic displacement to disengage the prosthesis from the LOCATOR F-Tx abutments.

**SimPLIFIED ANGLE CORRECTION/STRESS FREE PASSIVE FIT**

LOCATOR F-Tx™
A NEW WAY TO THINK ABOUT FIXED FULL-ARCH RESTORATIONS.

LOCATOR F-Tx is a simplified, time-saving solution for fixed full-arch restorations with no compromise to prosthesis strength or esthetics. Designed to maximize patient comfort and reduce treatment time compared to conventional screw-retained systems, it features a novel, patient-sensing, “snap-in” attachment that eliminates the need for sub-gingival cement or screw access channels. An exceptional solution for immediate provisionalization, the LOCATOR F-Tx system is highly cost-effective and is suitable for most conventional restorative options including all acrylic, metal-reinforced acrylic, PFM, and all-zirconia frameworks. Truly unique and cutting-edge, LOCATOR F-Tx is sure to deliver satisfaction for both the patient and clinician.

SIMPLICITY
Easy “snap-in” attachment and minimal components streamline procedures, while the unique design of the LOCATOR F-Tx Fixed Attachment System accommodates divergent/convergent scenarios up to 40 degrees between implants without the need for angled abutments.

STRENGTH AND ESTHETICS
No cylinders, screw access channels, and screw heads to compromise esthetics or weaken the prosthesis. The ability of each Denture Attachment Housing to pivot on the Abutment up to 20 degrees in any direction allows the housing to be positioned into the ideal location for the prosthesis.

TIME SAVINGS
Significant chair time savings over conventional techniques for fabrication of an immediate provisional prosthesis. Patient visits are also minimized and simplified with quick easy removal of the prosthesis during follow-up visits for final impressions and try-ins, as well as future recall and maintenance visits.

LOCATOR F-Tx PROSTHESIS MAINTAINS INTEGRITY AND ESTHETICS
Screw-retained prostheses with screw access channels
LOCATOR F-Tx PROSTHESIS
MAINTAINS INTEGRITY AND ESTHETICS
WE’VE MADE FIXED FULL-ARCH RESTORATIONS A SNAP.
NO SCREWS. NO CEMENT. NO COMPROMISES.

LOCATOR F-Tx IS A SIMPLIFIED, TIME-SAVING SOLUTION for fixed full-arch restorations with no compromise to prosthesis strength or esthetics. Designed to maximize patient comfort and reduce treatment time compared to conventional screw-retained systems, it features a novel, patient-sensing, “snap-in” attachment that eliminates the need for sub-gingival cement or screw access channels. By leveraging our many years of expertise with the LOCATOR® Attachment System and our understanding of full-arch solutions for edentulous patients, we strived to create a simpler, more efficient system for FIXED full-arch implant restorations.

Fixed for the Patient. Easily Removed by the Clinician.

INTRODUCING LOCATOR F-TX™. THE FIRST FIXED FULL-ARCH RESTORATION WITHOUT COMPROMISE.
What if screws or cement were no longer needed to attach a fixed prosthesis to the abutments?

What if you could shorten and simplify the treatment appointment?

What if the patient’s esthetics and comfort were maximized?

These questions were at the foundation of the design and development for the unique and innovative LOCATOR F-Tx™ Fixed Attachment System from Zest Dental Solutions. By leveraging our many years of expertise with the LOCATOR® Attachment System and our understanding of full-arch solutions for edentulous patients, we strived to create a simpler, more efficient system for fixed full-arch implant restorations. 

**INTRODUCING LOCATOR F-Tx**, the first fixed full-arch restoration without compromise.

**DENTURE ATTACHMENT HOUSING**
- LOCATOR F-Tx Abutment housing is threaded internally to accept a PEEK Retention Ball that snaps into the LOCATOR F-Tx abutments.
- Features an anodized pink finish for improved esthetics.
- Aggressive grooves and flats limit vertical and rotational movement.
- Chair side processing procedures at final prosthesis delivery ensures a stress free passive fit.

**SIMPLIFIED ANGLE CORRECTION/STRESS FREE PASSIVE FIT**
- LOCATOR F-Tx prosthesis removal system features a unique, spherical coronal geometry which allows the Denture Attachment Housing to rotate in any direction and correct up to 40 degrees of convergence/divergence between two implants eliminating the need for angled abutments.
- Chair side processing procedures at final prosthesis delivery ensure a stress free passive fit.

**REVOLUTIONARY PROSTHESIS REMOVAL SYSTEM**
- Removing the LOCATOR F-Tx prosthesis is quick and easy by using simple hydraulic displacement to disengage the prosthesis from the LOCATOR F-Tx abutments.
- Features a sealed pin for clinician safety.
- Aggressive grooves and flats limit vertical and rotational movement.
- Chair side processing procedures at final prosthesis delivery ensure a stress free passive fit.

**SECURE SNAP-FIT DESIGN**
- This revolutionary, patent-pending retention system is similar to a ball and socket, allowing the Denture Attachment Housing to securely snap into place and pivot to the desired position. Once in place, it’s fixed for the patient, and can easily be removed by the clinician during hygiene and maintenance visits.

**SIMPILIFIED ANGLE CORRECTION/STRESS FREE PASSIVE FIT**
- The LOCATOR F-Tx abutment features a unique, spherical coronal geometry which allows the Denture Attachment Housing to rotate in any direction and correct up to 40 degrees of convergence/divergence between two implants eliminating the need for angled abutments.
- Chair side processing procedures at final prosthesis delivery ensure a stress free passive fit.

**ALL-IN-ONE PACKAGING**
- LOCATOR F-Tx features all-in-one packaging that includes everything you need. Abutment (with cap to deliver the abutment to the implant site), Denture Attachment Housing with pre-inserted Processing Ball, an extra Processing Ball, as well as five Blue (Low), five Tan (Medium), and five Green (High) Retention Balls.

**DENTURE ATTACHMENT HOUSING**
- Retention PROCESSING BALLS
  - PEEK Retention Balls are available in low, medium and high retention levels based on the needs of the case.
  - A Processing Ball comes pre-inserted with the Denture Attachment Housing, and an additional Processing Ball is included both are used for provisionalization and laboratory procedures.
- Unique, spherical coronal geometry allows the Denture Attachment Housing to correct up to 40 degrees of convergence/divergence between two implants eliminating the need for angled abutments.
- Chair side processing procedures at final prosthesis delivery ensure a stress free passive fit.

**LOW MEDIUM HIGH RETENTION BALLS**
- Chair side processing procedures at final prosthesis delivery ensure a stress free passive fit.
- Pre-inserted Processing Balls ensure a stress free passive fit.
- An additional Processing Ball is included for provisionalization and laboratory procedures.

**LOCATOR F-Tx ABUTMENT**
- Anodized pink finish for improved esthetics.
- Aggressive grooves and flats limit vertical and rotational movement.
- Chair side processing procedures at final prosthesis delivery ensure a stress free passive fit.

**DENTURE ATTACHMENT HOUSING**
- LOCATOR F-Tx Abutment housing is threaded internally to accept a PEEK Retention Ball that snaps into the LOCATOR F-Tx abutments.
- Features an anodized pink finish for clinician safety.
- Aggressive grooves and flats limit vertical and rotational movement.
- Chair side processing procedures at final prosthesis delivery ensure a stress free passive fit.

**REVOLUTIONARY PROSTHESIS REMOVAL SYSTEM**
- Removing the LOCATOR F-Tx prosthesis is quick and easy by using simple hydraulic displacement to disengage the prosthesis from the LOCATOR F-Tx abutments.
- Features a sealed pin for clinician safety.
- Aggressive grooves and flats limit vertical and rotational movement.
- Chair side processing procedures at final prosthesis delivery ensure a stress free passive fit.

**SECURE SNAP-FIT DESIGN**
- This revolutionary, patent-pending retention system is similar to a ball and socket, allowing the Denture Attachment Housing to securely snap into place and pivot to the desired position. Once in place, it’s fixed for the patient, and can easily be removed by the clinician during hygiene and maintenance visits.

**SIMPILIFIED ANGLE CORRECTION/STRESS FREE PASSIVE FIT**
- The LOCATOR F-Tx abutment features a unique, spherical coronal geometry which allows the Denture Attachment Housing to rotate in any direction and correct up to 40 degrees of convergence/divergence between two implants eliminating the need for angled abutments.
- Chair side processing procedures at final prosthesis delivery ensure a stress free passive fit.

**ALL-IN-ONE PACKAGING**
- LOCATOR F-Tx features all-in-one packaging that includes everything you need. Abutment (with cap to deliver the abutment to the implant site), Denture Attachment Housing with pre-inserted Processing Ball, an extra Processing Ball, as well as five Blue (Low), five Tan (Medium), and five Green (High) Retention Balls.

**DENTURE ATTACHMENT HOUSING**
- Retention PROCESSING BALLS
  - PEEK Retention Balls are available in low, medium and high retention levels based on the needs of the case.
  - A Processing Ball comes pre-inserted with the Denture Attachment Housing, and an additional Processing Ball is included both are used for provisionalization and laboratory procedures.
- Unique, spherical coronal geometry allows the Denture Attachment Housing to correct up to 40 degrees of convergence/divergence between two implants eliminating the need for angled abutments.
- Chair side processing procedures at final prosthesis delivery ensure a stress free passive fit.

**LOW MEDIUM HIGH RETENTION BALLS**
- Chair side processing procedures at final prosthesis delivery ensure a stress free passive fit.
- Pre-inserted Processing Balls ensure a stress free passive fit.
- An additional Processing Ball is included for provisionalization and laboratory procedures.

**LOCATOR F-Tx ABUTMENT**
- Anodized pink finish for improved esthetics.
- Aggressive grooves and flats limit vertical and rotational movement.
- Chair side processing procedures at final prosthesis delivery ensure a stress free passive fit.

**DENTURE ATTACHMENT HOUSING**
- LOCATOR F-Tx Abutment housing is threaded internally to accept a PEEK Retention Ball that snaps into the LOCATOR F-Tx abutments.
- Features an anodized pink finish for clinician safety.
- Aggressive grooves and flats limit vertical and rotational movement.
- Chair side processing procedures at final prosthesis delivery ensure a stress free passive fit.

**REVOLUTIONARY PROSTHESIS REMOVAL SYSTEM**
- Removing the LOCATOR F-Tx prosthesis is quick and easy by using simple hydraulic displacement to disengage the prosthesis from the LOCATOR F-Tx abutments.
- Features a sealed pin for clinician safety.
- Aggressive grooves and flats limit vertical and rotational movement.
- Chair side processing procedures at final prosthesis delivery ensure a stress free passive fit.

**SECURE SNAP-FIT DESIGN**
- This revolutionary, patent-pending retention system is similar to a ball and socket, allowing the Denture Attachment Housing to securely snap into place and pivot to the desired position. Once in place, it’s fixed for the patient, and can easily be removed by the clinician during hygiene and maintenance visits.

**SIMPILIFIED ANGLE CORRECTION/STRESS FREE PASSIVE FIT**
- The LOCATOR F-Tx abutment features a unique, spherical coronal geometry which allows the Denture Attachment Housing to rotate in any direction and correct up to 40 degrees of convergence/divergence between two implants eliminating the need for angled abutments.
- Chair side processing procedures at final prosthesis delivery ensure a stress free passive fit.

**ALL-IN-ONE PACKAGING**
- LOCATOR F-Tx features all-in-one packaging that includes everything you need. Abutment (with cap to deliver the abutment to the implant site), Denture Attachment Housing with pre-inserted Processing Ball, an extra Processing Ball, as well as five Blue (Low), five Tan (Medium), and five Green (High) Retention Balls.

**DENTURE ATTACHMENT HOUSING**
- Retention PROCESSING BALLS
  - PEEK Retention Balls are available in low, medium and high retention levels based on the needs of the case.
  - A Processing Ball comes pre-inserted with the Denture Attachment Housing, and an additional Processing Ball is included both are used for provisionalization and laboratory procedures.
- Unique, spherical coronal geometry allows the Denture Attachment Housing to correct up to 40 degrees of convergence/divergence between two implants eliminating the need for angled abutments.
- Chair side processing procedures at final prosthesis delivery ensure a stress free passive fit.

**LOW MEDIUM HIGH RETENTION BALLS**
- Chair side processing procedures at final prosthesis delivery ensure a stress free passive fit.
- Pre-inserted Processing Balls ensure a stress free passive fit.
- An additional Processing Ball is included for provisionalization and laboratory procedures.

**LOCATOR F-Tx ABUTMENT**
- Anodized pink finish for improved esthetics.
- Aggressive grooves and flats limit vertical and rotational movement.
- Chair side processing procedures at final prosthesis delivery ensure a stress free passive fit.

**DENTURE ATTACHMENT HOUSING**
- LOCATOR F-Tx Abutment housing is threaded internally to accept a PEEK Retention Ball that snaps into the LOCATOR F-Tx abutments.
- Features an anodized pink finish for clinician safety.
- Aggressive grooves and flats limit vertical and rotational movement.
- Chair side processing procedures at final prosthesis delivery ensure a stress free passive fit.

- The LOCATOR F-Tx abutment features a unique, spherical coronal geometry which allows the Denture Attachment Housing to rotate in any direction and correct up to 40 degrees of convergence/divergence between two implants eliminating the need for angled abutments.
- Chair side processing procedures at final prosthesis delivery ensure a stress free passive fit.
LOCATOR F-Tx™
A NEW WAY TO THINK ABOUT
FIXED FULL-ARCH RESTORATIONS.

LOCATOR F-Tx is a simplified, time saving solution for fixed full-arch restorations with no compromise to prosthesis strength or esthetics. Compared to conventional screw-retained systems, it features a novel, patent pending “snap-in” attachment that eliminates the need for sub-gingival cement or screw access channels. An exceptional solution for immediate provisionalization, the LOCATOR F-Tx system provides a simplified, minimally invasive option for optimal restorative outcomes including all acrylic, metal-reinforced acrylic, PFM, and all zirconia frameworks. Truly unique and cutting-edge, LOCATOR F-Tx is sure to deliver satisfaction for both the patient and clinician.

SIMPLICITY
Easy “snap-in” attachment and minimal components streamline procedures, while the unique design of the LOCATOR F-Tx Fixed Attachment System accommodates divergent/convergent scenarios up to 40 degrees between implants without the need for angled abutments.

STRENGTH AND ESTHETICS
No cylinders, screw access channels, and screw heads to compromise esthetics or weaken the prosthesis. The ability of each Denture Attachment Housing to pivot on the Abutment up to 20 degrees in any direction allows the housing to be positioned into the ideal location for the prosthesis.

TIME SAVINGS
Significant chair time savings over conventional techniques for fabrication of an immediate provisional prosthesis. Patient visits are also expedited and simplified with quick, easy removal of the prosthesis during follow-up visits for final impressions and try-ins, as well as future recall and maintenance visits.
